PROFESSIONAL SUMMARY

Lead DevOps & Platform Engineer with 5 years building and owning mission-critical, high-density cloud infrastructure for high-growth AI SaaS and regulated FinTech. **Promoted to Lead within 10 months** at Spyne AI; now **leads three functions - DevOps, InfoSec and Data Engineering - reporting to the CTO**, having proposed and scoped two of them. Rebuilt the DevOps operating model from the ground up, **cutting monthly production incident volume ~85%**. Owns a **~\$1.5M/yr AWS estate**: ~2.5x AI inference throughput at **93% lower cost per image**, ISO 27001:2022 / SOC 2 / GDPR compliance, and zero-downtime recovery from global SEV-1 events. Equally effective writing the Terraform module, running the PO war room, negotiating AWS EDP credits, and defending platform economics in the monthly business review.

CORE COMPETENCIES

- Cloud & SRE:** AWS (Advanced) - EKS, ECS/Fargate, Batch, Step Functions, EventBridge Pipes, MSK, RDS/Aurora, Global Accelerator, Control Tower, IAM Identity Center, Transit Gateway; GCP; Azure; Multi-Region DR (Warm Standby).
- MLOps & GPU Platform:** NVIDIA Triton, KServe ModelMesh, Karpenter (fractional GPU / Spot), 3-pool L4 / L40S topology, SQS → Step Functions → AWS Batch, SSM-backed GPU AMI registry, SageMaker, ONNX.
- IaC & Automation:** Terraform, Terragrunt, CloudFormation, Ansible, Packer, GitOps, Python / Bash / Node.js (custom GitHub Apps), AWS Systems Manager, AI-assisted IaC (Claude Code).
- CI/CD & Developer Experience:** AWS CodePipeline / CodeBuild, Jenkins shared libraries, GitHub Actions, SonarQube gates, org rulesets & branch protection, golden-path SOPs, self-service platform tooling.
- Observability & Data:** LGTM stack (Loki, Grafana, Tempo, Mimir), CubeAPM, Prometheus, PagerDuty, MongoDB Atlas, RDS MySQL, Redis / ElastiCache, Kafka / MSK / Debezium, ClickHouse, Elasticsearch.
- Security & Compliance:** AWS WAF, GuardDuty, Secrets Manager, CloudHSM, least-privilege IAM, CloudFront OAC, SpyCloud ITDR, SAST/DAST/SCA gates; ISO 27001:2022, SOC 2, GDPR (Scrut), SEBI BYOK.
- Leadership:** Team leadership & hiring, org design, incident command, on-call & RCA governance, vendor escalation and commercial negotiation, MBR / executive stakeholder communication, technical writing.

PROFESSIONAL EXPERIENCE

Spyne AI (AI SaaS Startup)

Lead DevOps Engineer

DevOps Engineer II

Gurugram, Haryana

April 2026 - Present

May 2025 - March 2026

Code Commander Award (2025) - exceptional architectural ownership and rapid system restoration during critical SEV-1 outages.

Report to the CTO, leading three functions - DevOps, InfoSec and Data Engineering. Own the cloud platform, GPU/MLOps infrastructure, security, FinOps and incident command for Spyne's AI product suite across a **~\$1.5M/yr AWS estate** in a ~400-person organisation. Promoted to Lead in 10 months and set the engineering operating model.

- Built the DevOps Operating Model:** Established the function's engineering principles, standards and guardrails from scratch - per-team on-call rotations with PagerDuty/Slack schedule sync, RCA and blameless-postmortem discipline, branch-protection and merge governance, a Friday deployment-freeze policy, and golden-path SOPs - moving the team from reactive ticket support to platform engineering and **cutting monthly production incident volume ~85% (peak ~185/month to ~29)**.
- Organisational Design & Hiring:** Made and won the case that Spyne had outgrown "DevOps-managed" security and data infrastructure, then **created two net-new engineering functions** - an AI InfoSec Engineer role (LLM/model security, code & API security, VAPT, compliance) and a Data Engineer role, authoring its ClickHouse / ClickPipes / MongoDB / AWS-networking technical baseline. Acted as hiring manager end-to-end: JD authorship, pipeline shortlisting and technical interviews across DevOps, InfoSec and IT Manager roles. Both functions now report into this role.
- Executive Communication & AI Adoption:** Own the Platform & DevOps Monthly Business Review to the CTO and engineering leadership (Jun-Jul 2026: 92 initiatives tracked, 25 delivered, 8 incidents and RCAs closed), reframing infrastructure delivery as business outcomes. Drove the team's migration from Cursor to Claude Code with an in-house DevOps agent for RCA and findings - **45K+ lines AI-generated, 1,600+ agent runs, 100% of Terraform AI-authored or refactored**.
- Serverless MLOps Platform:** Architected and shipped **3 greenfield GPU-batch ML inference platforms** (Image, 3D, AutoQC) as independent Terraform monorepos on a common **SQS → EventBridge Pipe → Step Functions → AWS Batch → S3** backbone, with per-AZ workspace isolation, dual-DLQ failure handling, and a tfvars-only service-catalog pattern that onboards new CPU/GPU services with zero new resource blocks.
- GPU Throughput & Cost Structure:** Raised image-processing throughput **~2.5x (3.0s → 1.20s per image)** via a 5-way parallel GPU fan-out and a 3-pool isolated topology (g6/L4 + g6e/L40S) with multi-container Triton sidecars and an SSM-backed zero-downtime GPU AMI registry - now sustaining **~6,700 images/hour and 216K images/day**. Subsequently **retired the dehaze GPU service outright and downsized GPU tiers - holding or doubling throughput at equal or lower cost**.
- FinOps Ownership:** Cut **GPU inference cost per image by 93% (\$0.0011 → \$0.0001)** by replacing an always-on GPU fleet with the serverless batch platform, and instrumented per-batch and per-image cost in a live dashboard the organisation now runs on. Negotiated a **\$6K EDP credit** jointly with AWS and Spyne Finance; caught a **35M-message EventBridge/SQS pendency loop** before it reached the bill; co-located hot-path storage in a single AZ via **S3 Express One Zone** to eliminate cross-AZ transfer; downscaled MongoDB Atlas M40 → M30

and root-caused a \$1,600 GCP Gemini spike. Delivered the platform side of flattening cloud-spend growth from **+\$10-12K/month to +0.9% month-over-month**.

- **Security Governance (P0 programmes):** Led **Project Shield**, ending shadow IT by migrating internal and agentic applications onto governed, Terraform-only AWS with OU → BU → PU segregation - the foundation for SOC 2 and GDPR. Ran the **API Security War Room**, closing unauthenticated API exposure on the public ALB behind a WAF auth gate validated against **~242K requests at 97%+**. Built **multi-account IAM Identity Center as code** (5+ accounts, SOC-aligned access tiers, production role revocation, org-wide IAM standardisation).
- **Threat Response & Compliance:** Drove **ISO 27001:2022, SOC 2 and GDPR** compliance via Scrut, closing 35+ high-risk findings. Remediated an **UpGuard cyber-risk assessment across 93 assets** - deprecating 7 vulnerable domains including a critical n8n RCE and securing 5 internal tools - feeding ICICI Lombard underwriting toward reduced cyber-insurance premiums. Detected and stopped a **GuardDuty-flagged cryptomining/botnet compromise** of a production container; designed Spyne's first **Bug Bounty & Responsible Disclosure** framework; led triage of an externally reported SSRF and temporary-credential exposure.
- **Reliability & Incident Command:** Recovered a **14-hour EKS model-serving outage, restoring all 43 production models**; engineered a zero-downtime **AWS Global Accelerator** fallback during the global Cloudflare outage (Nov 2025); built the **PagerDuty → JIRA → Slack** incident pipeline (~1,400 LOC, fingerprint deduplication, 6-hour reopen window, 62+ tests) with automatic RCA ticketing; designed multi-region Warm Standby DR (us-east-1 → us-east-2).
- **Vendor Escalation & Commercial Leadership:** Escalated a multi-week **us-east-1 GPU capacity crunch** through AWS Solutions Architects and CloudKeeper, securing a dedicated **Technical Account Manager** and an instance-family diversification path that unblocked production scale-up; recovered **service credits** from failed MongoDB Atlas migrations and elevated the account to CTO ↔ Regional Director alignment; owned build-vs-buy on SpyCloud ITDR (\$65K/yr) and Cloudflare Enterprise (\$18.6K/yr).
- **Developer Experience & Database SRE:** Launched a **self-service application platform** (Agentic Dev Platform + Unified Console, 8 Next.js apps on ECS Fargate) moving product teams off Vercel onto governed AWS, backed by 9 modernised core Terraform modules and self-serve SOPs. Audited all **179 repositories** in the GitHub org and rolled a shared test/coverage/SonarQube workflow into every applicable one, bringing **110 projects under enforced quality gates**; engineered a **Node.js GitHub App** blocking PRs without valid JIRA linkage. Migrated MongoDB Atlas to **PrivateLink (~32% latency improvement, zero egress)** and shipped automated RDS/Atlas slow-query reporting with >30s auto-kill.

SMC Global Securities Limited (FinTech)

New Delhi

Member of Technical Staff - II (Cloud & DevOps)

March 2024 - May 2025

Architects of Innovation Award (2024) - for transforming legacy on-premises data centres into a modern AWS cloud ecosystem.

- **Cloud Migration & GitOps:** Led migration of on-premises data centres to AWS and championed GitOps adoption to **97% Infrastructure-as-Code coverage** using Terraform, Terragrunt, Packer, Ansible and CloudFormation, reducing provisioning time from days to minutes.
- **DevSecOps Pipeline:** Architected a "Shift-Left" security strategy inside AWS CodePipeline with automated gates - SAST (SonarQube), DAST (OWASP ZAP), secret scanning (Trufflehog, git-secrets) and container scanning (Trivy) - cutting deployment time **40%** while blocking vulnerabilities before production.
- **Regulated Compliance:** Implemented **AWS CloudHSM** for encryption key management meeting SEBI **Bring-Your-Own-Key** guidelines and ISO 27001 standards; deployed hybrid cloud / on-prem perimeter security via AWS Firewall Manager with custom and managed WAF ACL rules.
- **Observability & Incident Response:** Designed a scalable **LGTM** (Loki, Grafana, Tempo, Mimir) stack across AWS ECS with Grafana Alloy sidecars and cross-account **Transit Gateway** networking; transformed remediation workflows with AWS Systems Manager, materially reducing MTTR.

CodeLogicX Technologies Private Limited

Kolkata, West Bengal

Cloud Security & DevOps Engineer

June 2021 - March 2024

Rising Star Award (2023) - for driving automation and infrastructure excellence.

- **CI/CD Optimisation:** Increased application deployment frequency **8x** by designing robust automated pipelines on AWS CodePipeline, CodeDeploy and Elastic Beanstalk.
- **Cloud Provisioning & FinOps:** Provisioned and managed core AWS services (VPC, S3, IAM, RDS, ElastiCache), reducing manual infrastructure setup time **30%**; implemented CloudWatch-based cost and billing guardrails.
- **Security Engineering & Mentoring:** Ran vulnerability management via AWS GuardDuty and Inspector; rolled out enterprise UEM (SureMDM) and Bitdefender GravityZone; deployed Pritunl VPN; mentored junior engineers on cloud fundamentals.

AWARDS, CERTIFICATIONS & PUBLICATIONS

- **Awards:** Code Commander Award (Spyne AI, 2025) | Architects of Innovation Award (SMC Global, 2024) | Rising Star Award (CodeLogicX, 2023).
- **Certifications:** Security Architecture (Infosec) | DevSecOps (Infosec) | Networking Essentials & Introduction to Cybersecurity (Cisco).
- **Publications:** Multi-region AWS Disaster Recovery architecture series and platform-engineering writing at dcmmechanics.medium.com; 72+ internal architecture, RCA and SOP documents authored at Spyne AI.

EDUCATION

Maharshi Dayanand University - Bachelor of Technology, Computer Science & Engineering

Rohtak, Haryana | 2014 - 2018
